

Gabriel David Patrón

Citizenship: Canadian, Colombian

Languages: English, Spanish

Modelling environments: Aspen Plus/HYSYS, GAMS, gPROMS, MATLAB, Python (Pyomo)

Department of Chemical Engineering, University of Waterloo

E6-3104, 259 Phillip St, Waterloo, ON, CA, N2L 3W8

g2patron@uwaterloo.ca

Final year PhD candidate looking for postdoctoral research positions in modelling, control, and optimization of process systems. Interested in applications to sustainable processes, carbon capture, and energy generation, as well as methods to deal with process uncertainty.

Education

Department of Chemical Engineering, University of Waterloo, CA

2018–

PhD, Process Systems Engineering

- Supervisor: Luis Ricardez-Sandoval
- Topics: Moving horizon estimation (MHE), model predictive control (MPC), real-time optimization (RTO), post-combustion carbon capture (PCC), chemical looping combustion (CLC).

Department of Chemical Engineering, Imperial College London, UK

2017–2018

MSc, Process Systems Engineering (Merit)

- Supervisor: Amparo Galindo
 - o *An Application of Residual Entropy Scaling to Calculate and Predict Viscosity Using the SAFT- γ Mie Equation of State.*

Department of Chemical and Biomolecular Engineering, National University of Singapore, SG

2016

Research exchange

- Supervisors: Ning YAN, Jianguang ZHANG (now at the University of Lincoln, UK)
 - o *Formic Acid-Mediated Pyrolysis of Woody Biomass.*

Department of Chemical Engineering and Applied Chemistry, University of Toronto, CA

2013–2017

BASc, Chemical Engineering (Honours)

- Minor in sustainable energy.

Publications

Patrón, G and Ricardez-Sandoval, L. (2022). An integrated real-time optimization, control, and estimation scheme for post-combustion CO₂ capture. *Applied Energy* 2022: 308; 118302.

Patrón, G and Ricardez-Sandoval, L. (2020). A robust nonlinear model predictive controller for a post-combustion CO₂ capture absorber unit. *Fuel* 2020: 265; 116932.

Patrón, G and Ricardez-Sandoval, L. (2020). Real-Time Optimization and Nonlinear Model Predictive Control for a Post-Combustion Carbon Capture Absorber. *IFAC-PapersOnLine* 2020: 53(2); p. 11595–11600.

Active projects

Patrón, G and Ricardez-Sandoval, L. A low-variance real-time optimization approach for noisy process systems.

- Proposes an algorithm for the parameter-estimation step in real-time optimization such that the lowest-variance set of measurements are used and erroneous parameter updates are filtered. A lower variance operation leads to less capricious control and better economic performance.

Patrón, G and Ricardez-Sandoval, L. A fast modifier adaptation approach for real-time optimization.

- The traditional modifier adaptation scheme to account for structural model uncertainty is adapted to become more computationally efficient through a simplified gradient estimation step. This results in faster control action with only modest performance deterioration with respect to the full algorithm.

Conference presentations

Patrón, G and Ricardez-Sandoval, L. (2020). Towards an integrated approach for real-time economic optimization, state estimation, and control for a post-combustion carbon capture absorber section. *AIChE annual meeting 2020*, 596c.

Patrón, G and Ricardez-Sandoval, L. (2020). Real-Time Optimization and Nonlinear Model Predictive Control for a Post-Combustion Carbon Capture Absorber. 21st IFAC world congress, VI161-09.9

Awards and grants

Faculty of Engineering Domestic Doctoral Student Award <i>University of Waterloo</i>	2018–2022
Graduate Research Studentship <i>University of Waterloo</i>	2018–2022
Centre for International Experience Award <i>University of Toronto</i>	2016
Cross-Disciplinary Program Summer Grant <i>University of Toronto</i>	2016
University of Toronto Entrance Scholarship <i>University of Toronto</i>	2013

Teaching and mentoring

Undergraduate teaching assistantship <i>University of Waterloo, CHE420: Introduction to Process Control with Prof. Hector Budman</i>	2019, 2020
Undergraduate student supervision <i>University of Waterloo, final year design project: Design of a Chemical Looping Combustion Model for Reducing Carbon Footprint</i>	2021
<i>University of Waterloo, final year design project: Modelling and Optimization of Chemical Looping Combustion (CLC) Process</i>	2020

Professional membership

American Institute of Chemical Engineers (AIChE) - Graduate Student Member	2022–
Canadian Society for Chemical Engineering (CSCHE) - Graduate Student Member	2022–
International Federation of Automatic Control (IFAC) - Affiliate Member	2022–

Professional service

Peer reviewer for: <i>The 13th IFAC Symposium on Dynamics and Control of Process Systems, including Biosystems (DYCOPS) in Busan, Republic of Korea, June 14-17, 2022.</i>	2022
--	------

Industrial experience

<i>EllisDon Corporation</i>	2015
M.E.I.T. Intern, New Oakville Trafalgar Memorial Hospital	
<ul style="list-style-type: none"> - Worked with specialty teams - Mechanical, Electrical, and Information Technology - during the commissioning of the project. - Performed calibration, testing, and troubleshooting for hospital communications and emergency systems - to meet strict hospital regulations and standards. - Identified system deficiencies and liaised with subcontractors to find solutions. - Modified drawings for hoarding permit applications using Autodesk. 	
<i>EllisDon Corporation</i>	2014
Estimating Intern	
<ul style="list-style-type: none"> - Was a part of the proposal team that formed an estimate for - and won - the Eglinton Light Rail Transit (ELRT) Project. - Management of several project-specific tender packages, including assessment of requirements based on specifications, qualification process, management of quotes, quantity takeoffs, and estimates.
